Tamron | Model: A035 Owner’s manual

100-400mm F/4.5-6.3 Di VC USD
(for Nikon, Canon)

1. Focusing
2. Zooming
3. AF LIMIT \( \rightarrow \) MF
4. AF LIMIT \( \rightarrow \) MF
5. AF LIMIT \( \rightarrow \) MF

* The Marking is a directive conformity mark of the European Community (EC).
  * Das -Zeichen entspricht der EC Norm.
  * La marque est un marquage de conformité à la directive CEE (CE).
  * La marca es marca de conformidad según directiva de la Comunidad Europea (CE).
  * Il marchio attesta la conformità alla direttiva della Comunità Europea (CEE).
  * 标志表示符合欧州共同体(EC)指令

Thank you for purchasing the Tamron lens as the latest addition to your photographic equipment. Before using your new lens, please read the contents of this Owner’s Manual thoroughly to familiarize yourself with your lens and the proper techniques for creating the highest quality images possible. With proper handling and care, your Tamron lens will give you many years of photographing beautiful and exciting pictures.

- Explains precautions that help to prevent problems.
- Explains things you should know in addition to basic operations.

**PART NAMES (Refer to Fig. 1)**

1. Lens hood
2. Hood attaching alignment mark
3. Hood locking mark
4. Filter ring
5. Hood release mark
6. Focal length scale
7. Focus ring
8. Distance mark
9. Zoom lock switch
10. AF/MF switch
11. AF/MF lock
12. Lens-camera interface contacts
13. Tripod mount (Model A035TM / sold separately)
14. Screw hole for safety lock screw
15. Hexagonal wrench

**MAIN SPECIFICATIONS**

- Model: A035
- Focal Length: 100-400 mm
- Maximum Aperture: F/4.5-6.3
- Angle of View: 24° 24' - 8° 12'
- Lens Construction: 11/17
- Minimum Focus Distance: 1.3 m (58.1")
- Maximum Magnification Ratio: 1:3.6
- Filter Size: 67 mm
- Length: 196.5 mm (7.7")
- Diameter: ø 86.2 mm
- Weight: 1,195 g (39.3 oz)
- Lens Hood: HA035
- Tripod mount: ø 80.2 mm

**ZOOMING (Ref. Figs. 1, 2)**

When looking through the camera’s viewfinder, rotate the zooming ring (8) of the lens to set the focal length suitable for the image, and then shoot.

- **Setting the zoom lock (Ref. Fig. 8)**
  - Align 100 mm on the focal length scale (7) with the focal length mark (8). Push the zoom lock switch (9) to the zooming ring side.

- **Releasing the zoom lock (Ref. Fig. 9)**
  - Push the zoom lock switch (9) toward the camera.

**ATTACHING AND REMOVING THE LENS**

Remove the rear cap of the lens. Align the lens attachment mark (6) and mounting mark on the camera, and then insert the lens. Turn the lens counterclockwise for Nikon models or clockwise for Canon models until it locks. To remove the lens, turn the lens in the opposite direction while pressing the lens release button on the camera.

- **ATTACHING**
  - Turn off the power of the camera before attaching or removing the lens.
  - In the case of Canon cameras, align with the EF lens mark (red circle).

- **REMOVING**
  - For details, please read the instruction manual of your camera.

**SWITCHING FOCUS MODE (Ref. Figs. 11 - 15)**

To shoot using autofocus (AF), set the AF/MF switch (10) to “AF”. (Ref. Fig. 13)

To shoot using manual focus (MF), set the AF/MF switch (10) to “MF”, and then use your hand to turn the focus ring (8) and focus the image. (Ref. Figs. 2, 4)

You can limit the AF focus range by setting the AF/MF switch (10) to “LIMIT”.

The focus range you may limit will differ depending on the current focus distance. If the focus position is longer than 7 m: *7 m
If the focus position is shorter than 7 m: 7 m - 1.5 m

* You can change the AF range limit, which is set to 7 m by default, using the TAP-in Console (sold separately).

**VC MECHANISM (Ref. Figs. 11, 6, 7)**

The VC (Vibration Compensation) mechanism reduces image blur caused by hand-held shooting.

**How to use VC (Ref. Figs. 6, 7)**

You can change the VC mode by using the VC switch (14).

**MODE 1** Basic mode that balances finder-image stability and the actual compensation effects.

**MODE 2** Panning mode

- **In MODE 1**, you can change the settings using the TAP-in Console (sold separately).
- **VC is effective under the following conditions**
  - Demi lit locations
  - Locations where flash photography is prohibited
  - Locations where you have unstable standing position.

**VC may not perform sufficiently under the following conditions**

- When a photograph is taken from a vehicle that is shaking greatly
- Shooting during excessive movement of the camera
- When shooting while using a tripod
- Set the VC switch (4) to “OFF” when taking pictures with bulb photography (long exposures).
- Otherwise, VC may cause a malfunction.

- The viewer’s image may become blurred immediately after the shutter button is pressed halfway. This is due to the principles of VC and not a malfunction.
- When the VC switch (4) is set to “ON”, the total number of recordable images will reduce due to power being consumed from the camera.
- Set the VC switch (4) to “OFF” when you are shooting while the camera is secured by something other than your hand (such as a tripod).
- Do not remove the lens from the camera while VC is on. If the lens is removed while VC is on, the lens may make a clicking sound if the lens is shaken. This is not a malfunction. If the lens is installed on the camera, and the camera’s power is switched on, the sound stops.
- For Nikon cameras equipped with a built-in flash, VC will be turned off while the built-in flash is charging.

**PRECAUTIONS WHEN SHOOTING**

- An internal focusing (IF) system is employed to reduce the minimum focus distance. Because of this, the angle of view is wider than that of lenses using other focusing systems when shooting at a distance less than infinity.
- Always remove the hood when you use the built-in flash on the camera for flash photography. Otherwise, the hood or lens may darken the perimeter of the image. With close-up photography, the lens itself blocks the flash, and dark semicircle may appear at the bottom of the screen, even when the lens hood is not used. For flash photography, we recommend that you use an external flash unit recommended by the camera manufacturer.
- Differences in the display systems of cameras may result in the display of values different from the maximum and minimum aperture values in the specifications. This is not an indication of an error.
- Use with mirrorless interchangeable-lens cameras is not guaranteed.

**LENS HOOD (Ref. Figs. 11, 16 - 17)**

A bayonet-type lens hood (16) is provided as standard equipment. We recommend shooting with the hood properly attached because the lens hood eliminates stray light that may affect the picture.

- **Using the lens hood (Ref. Figs. 16, 11)**
  - Align the hood attaching alignment mark (6) of the hood with the hood release mark (5) of the lens.
  - Rotate the hood (16) in the direction of the arrow until the hood locking mark (6) meets the hood release mark (5).

- **Stowing the lens hood (Ref. Fig. 12)**
  - You can store the lens hood (16) by attaching it in reverse.
  - Align the hood attaching alignment mark (6) of the hood with the hood release mark (5) of the lens.
  - Rotate the hood (16) in the direction of the arrow until the hood attaching alignment mark (6) meets the hood release mark (5).

**TRIPOD MOUNT (Sold separately) (Ref. Figs. 11, 12, 14, 16)**

You can secure the lens to the tripod using the tripod mount (8) for A035 model (model A035TM sold separately).

**Attaching and removing the tripod mount (Ref. Figs. 13, 16)**

You can attach and remove the tripod mount by loosening tripod mount locking screw (9) and then lift the portion with the screw, to open the ring. When attaching the tripod mount, make sure that the protruding part on the inner side of the tripod mount is inserted into the groove on the lens barrel, and then tightly secure the tripod mount locking screw (9).

**Changing the directional position of the camera (Ref. Fig. 14)**

When you change the directional position of the camera, you can rotate the lens by loosening the tripod mount locking screw (9). Align the tripod mount mark on the lens (16) with the mark on the tripod mount (8). After determining the shooting position, tightly secure the tripod mount locking screw (9) to fix the position.

**SAFETY LOCK SCREW (Accessory for the tripod mount) (Ref. Figs. 11, 15)**

We recommend attaching the lock screws in accordance with the camera platform type when you use an ARCA-SWISS-standard compatible camera platform or clamp.

**How to use safety lock screws (Ref. Fig. 15)**

The safety lock screws (2) prevent the lens/camera from falling from the camera platform when a tripod mount is attached to an ARCA-SWISS-standard compatible camera platform or clamp.

- As shown on the figure, use the hexagonal wrench (9) to tighten the safety lock screws (2) to the safety hole (12).
TO ENSURE LONG-TERM SATISFACTION

- Remove dust and soiling on the lens by using a blower or soft brush. Do not touch the lens with your fingers.
- To clean the lens surface, lightly wipe it starting from the center with a commercially available lens cleaning paper, a clean cotton cloth or a microfiber cloth (cleaning cloth for glasses, etc.) soaked in lens cleaner. Do not use a silicone cloth.
- Clean the lens barrel using a silicone cloth. Never use benzene, thinner, or other organic solvents.
- The front element has been coated to prevent water and oily substances from adhering. Since it will repel water, do not use lens cleaners or other substances but only a dry cloth to clean the front element.
- Mildew is a major problem for lenses. Store your lens in a clean, cool, and dry place. When you store the lens in a lens case, store it with a commercially available drying agent and replace the drying agent occasionally.
- Do not touch the lens-camera interface contacts. If dust or stains cause contact problems, signals are not transmitted properly between the lens and camera, and malfunctions may occur.
- If the temperature changes suddenly, moisture may form within the camera and lens and cause malfunctions.

To prevent this, seal your equipment in a plastic bag or similar container. After your equipment has adjusted to the ambient temperature, remove it from the bag and use it as usual.

Disposal of Electrical and Electronic Equipment in Private Households.
Disposal of used Electrical & Electronic Equipment (Applicable in the European Union and other European countries with separate collection systems)

This symbol indicates that this product shall not be treated as household waste. Instead it shall be collected separately for the recycling of electrical and electronic equipment.

If the new products are purchased, this product might be handed over to the distributor or the collection system of waste electrical and electronic equipment eventually. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product or components of this product.

If this product is disposed illegally, it might cause a possibility of penalties. For more detailed information about recycling of this product, please contact your local Civic Office, your household waste disposal service or the shop where you purchased the product.
For safe operation be sure to carefully read the "Precautions for Safe Use of Tamron Lenses" and the manual before using the product. After reading them, store them in a place where they can easily be reviewed whenever needed. Caution instructions are divided into the following two categories according to the degree of danger involved.

**WARNING**

- Do not view the sun or other strong light source directly through the lens or through a camera while using this lens. Doing so could cause loss of vision, damage to the lens and/or the camera, and possibly cause the lens and/or camera to ignite.
- Do not disassemble, repair, or modify the lens. This could damage the lens or camera.
- Keep the lens out of the reach of small children. There is a risk of injury if the lens is dropped or falls down.

**CAUTION**

- Do not place lens in direct sunlight or leave it in an extremely hot place such inside a car. Doing such could damage the internal parts of the lens or cause a fire.
- Always attach the lens cap whenever the lens is not in use.
- When attaching the lens to the camera, ensure that the lens has been properly attached to the camera and firmly locked. If the lens is not attached properly, it could be difficult to remove or it could fall off causing damage or injury.
- Do not use this lens for any application other than photography.
- Do not transport the lens while it is still attached to a tripod.
